SUMMARY

Results-driven Senior Data Engineer with extensive experience in building and optimizing data pipelines and production data models using Snowflake, dbt, and Python. Proficient in managing large-scale data processing, data quality management, and real-time data processing. Strong background in ETL/ELT processes, analytics engineering, and data visualization. Passionate about developing data models that fuel trusted insights and advocating for best practices in data product usage. Seeking to leverage my skills in data engineering for high-impact projects at Komodo Health.

WORK EXPERIENCE

Data Engineer at Avant LLC, Chicago:

(Aug 2021 –Present)

- Architected and managed production data models in Snowflake, including documentation and data tests, improving data processing efficiency by 20%.
- Implemented robust data quality checks using SODA for real-time validation, developed custom Python scripts to rectify anomalies, and automated anomaly detection, resulting in a 30% reduction in data discrepancies and enhanced overall data reliability.
- Developed and maintained data pipelines using Databricks and Spark, building and optimizing Spark-based data pipelines, and implementing machine learning models for predictive analytics.
- Created Tableau dashboards for marketing attribution, contributing to a 4% increase in application rates by extracting insights from marketing data to create source attribution funnel dashboards in Looker.
- Collaborated with cross-functional teams to implement data quality checks using SODA, further utilizing AWS services including Redshift and S3 for large-scale data processing and storage.
- Developed Tableau dashboards for marketing attribution, contributing to a 4% increase in application rates. Extracted insights from marketing data to create source attribution funnel dashboard in Looker, helping business stakeholders to improve customers' application experience.
- Collaborated with cross-functional teams to implement data quality checks using SODA, further utilizing AWS services including Redshift and S3 for large-scale data processing and storage.

Data Engineer Intern at CNH Industrial Inc., Racine:

(Mar 2021 – Aug 2021)

- Designed and implemented efficient ETL processes using Microsoft Access, optimizing SQL queries, and automating reporting systems, resulting in enhanced data management and accessibility.
- Collaborated with data scientists to define data requirements, implemented ETL processes for seamless data integration, optimized SQL queries, and facilitated the development of predictive models, fostering a synergistic environment for data-driven insights.

Data Engineer at Daten Solutions Inc., Chicago:

(May 2020 – Mar 2021)

- Developed and automated data migration pipeline from SQL Server to Snowflake using SnowSQL and SnowPipe, and further enhanced data quality by performing dimensional modeling on the migrated data.
- Automated ETL processes using Prefect (Python), enhancing data wrangling capabilities and achieving a 40% reduction in time through large-scale data conversions.
- Automated reporting process using Excel VBA (Macros) and MySQL, maintaining accuracy and saving ~75% of time, with version control maintained using Git, Mercurial, SVN.

Data Engineer – Practicum Student at Labelmaster, Chicago:

(May 2020 – Dec 2020)

- Designed databases, data marts, and E-R models for OLTP and multi-dimensional models for OLAP using SnowSQL.
- Minimized technical debt in managing new data requirements, ensuring scalability and sustainability of data solutions, resulting in a 20% reduction in maintenance time within six months.
- Automated hourly status reports, saving 10 man-hours/week, thus decreasing response time for fixes and campaign failures.

Big Data Developer at Cartesian Consulting, Mumbai:

(Apr 2018- Jul 2019)

- Designed and implemented ETL processes using DynamoDB, resulting in a 50% reduction in processing time.
- Developed dimensional data models and a MariaDB-powered data warehouse, supporting the creation of a campaign data-mart and a comprehensive customer one-view for marketing campaigns.
- Developed data ingestion frameworks to integrate data from various sources, improving data availability for analytics.
- Implemented data transformation and aggregation processes, enabling more efficient reporting and analysis.
- Collaborated with business stakeholders to understand data requirements and deliver solutions that met their needs.

EDUCATION

- **MS in Computer Science and Mathematics**, Illinois Institute of Technology, **GPA: 3.8**

(Aug 2019 - May2021)

Related Courses: Big Data Technologies, Applied Statistics, Database Management, Data Preparation and Analysis.

- **MS in Statistics**, NMIMS University, **GPA: 3.35**

(Jul 2016 - Apr 2018)

- Certifications: [Snowflake Pro Certification](#), Databricks Certified Associate Data Engineer

SKILLS

- **Programming:** Python, SQL, Scala, Java, HTML, Excel VBA (Macros).
- **Big Data Ecosystem:** Spark, Hadoop, MapReduce, Hive, Pig, Kafka, Flume, Hbase, Microsoft Azure.
- **Distributed Data/Computing Tools:** MapReduce, Hive, Spark
- **Cloud Technologies:** Azure Data Factory, Azure Blob, NoSQL, Cassandra, MongoDB, Kubernetes, Snowflake, CircleCI, Airflow, Prefect, Google Data Studio, Azure Synapse Analytics, DynamoDB.
