SUMMARY

Experienced Data Engineer with a proven track record of designing, developing, and maintaining mission-critical Big Data and Machine Learning applications. Proficient in building data pipelines, deriving insights through advanced analytics techniques, and deploying ML models at scale. Skilled in collaborative environments, adept at mentoring team members and sharing knowledge across cross-functional teams.

WORK EXPERIENCE

Data Engineer at Avant LLC, Chicago:

(Aug 2021 –Present)

- Designed and developed data pipelines leveraging advanced analytics techniques and streaming technologies to extract actionable insights from large-scale datasets, resulting in a 30% reduction in data discrepancies and enhanced overall data reliability.
- Led end-to-end data transformation workflows with dbt (data build tool), achieving a 20% improvement in analytics process efficiency and ensuring reproducibility.
- Extracted insights from marketing data to create **source attribution funnel** dashboard in Looker, this helped business stakeholders to improve customers' application experience, and increase application rate by 4%.
- Migrated marketing campaign pipelines from conventional marketing tools like Responsys to Segment using API supported python libraries.
- Built a refinance product data pipeline for existing loan customers based on their TransUnion credit scores and existing features, contributing to a 10% increase in the overall refinance book.
- Understand and write complex sql queries as a source of ETL pipelines, providing required recommendations to the DBA team such as adding an index on the frequently used tables, ultimately to improve query optimization.
- Proficient in writing complex SQL queries as a source for ETL pipelines, providing recommendations to the DBA team for optimization, including index creation and partition changes.
- Implemented Spark Streaming and Kafka for real-time data ingestion and processing, improving decision-making capabilities and operational efficiency.

Data Engineer Intern at CNH Industrial Inc., Racine:

(Mar 2021 – Aug 2021)

- Designed and implemented efficient ETL processes using Microsoft Access, optimizing SQL queries, collaborating with cross-functional teams, automating reporting systems, and conducting performance tuning, resulting in enhanced data management and accessibility.
- Led the implementation of Kafka Streaming, enhancing real-time data processing efficiency by 30%, resulting in more informed decision-making and a 20% improvement in system responsiveness.
- Led a CNH Industrial supply chain materials data engineering project, achieving a 25% reduction in errors and a 20% improvement in supply chain lead times through the implementation of advanced ETL strategies and a centralized data repository.

Data Engineer at Daten Solutions Inc., Chicago:

(May 2020 – Mar 2021)

- Developed and automated data migration pipeline from SQL Server to Snowflake using SnowSQL and SnowPipe, and further enhanced data quality by performing dimensional modeling on the migrated data.
- Automated ETL processes using Prefect (Python), enhancing data wrangling capabilities and achieving a 40% reduction in time through large-scale data conversions. Facilitated the seamless transfer of BAAN data into standardized formats for integration into Snowflake.
- Created Tableau dashboards to explain variation in success Metrics and Time Series Analysis to higher management.
- Automated reporting process using Excel VBA (Macros) and MySQL maintaining accuracy and saving ~ 75% of time, maintained version control Git, Mercurial, SVN.

Data Engineer – Practicum Student at Labelmaster, Chicago:

(May 2020 – Dec 2020)

- Involved in designing databases, data marts, E-R model for OLTP and multi-dimensional model for OLAP using SnowSQL.
- Optimized complex SQL scripts for quality checking of projects and populating output tables for deployment using Azure Pipelines.
- Automated hourly status report saving 10 man-hours/week, thus decreasing response time for fixes and campaign failures.

Big Data Developer at Cartesian Consulting, Mumbai:

(Apr 2018- Jul 2019)

- Designed and implemented ETL processes using Azure Data Factory, resulting in a 50% reduction in processing time.
- Implemented data governance policies resulting in a 30% reduction in data quality issues.
- Formulated and implemented data governance policies, resulting in a substantial 30% reduction in data quality issues within the MariaDB environment.
- Developed dimensional data models and a MariaDB-powered data warehouse, strictly adhering to integrity and normalization rules. This infrastructure supported the creation of a campaign data-mart and a comprehensive customer one-view for marketing campaigns.

EDUCATION

- MS in Computer Science and Mathematics**, Illinois Institute of Technology, **GPA: 3.8**

(Aug 2019 - May2021)

Related Courses: Big Data Technologies, Applied Statistics, Database Management, Data Preparation and Analysis.

- MS in Statistics**, NMIMS University, **GPA: 3.35**

(Jul 2016 - Apr 2018)

- Certifications: [Snowflake Pro Certification](#), Databricks Associate Data Engineer Certification

SKILLS

- Programming Languages:** Python, Scala, SQL
- Big Data Technologies:** Spark, Spark Streaming, Kafka, EMR
- Data Modeling:** Experience with data modeling, warehousing, and building ETL pipelines with orchestration using Airflow.
- Source Code Management:** Git
- CI/CD Pipelines:** Jenkins
- Communication and Collaboration:** Excellent communication and collaboration skills, ability to work effectively within cross-functional teams.
