Hiring Manager

Kunai

Dear Hiring Manager,

I am writing to express my sincere interest in the Senior Data Engineer position at Kunai, as outlined in your recent job posting. With a solid foundation in data engineering, extensive experience in designing and implementing ETL processes, and a commitment to exceeding client expectations, I am eager to contribute to Kunai's mission of solving tough technical challenges and delivering exceptional customer success.

In my previous role as a Data Engineer, I successfully planned and executed data integration processes, from designing common keys in physical data structures to establishing integration specifications and determining best-fit data interchange methods. My experience spans examining data applications, models, and warehouse schema, forecasting resource requirements, and analyzing various data stores for accurate retrieval and use.

I bring a wealth of experience in validating data integration through the development and execution of comprehensive test plans. Utilizing tools such as SQL, Power BI, Cognos, and Excel, I have consistently provided technical reports that are meaningful and readily accessible to stakeholders. My outstanding communication skills, both verbal and written, have been pivotal in translating reporting requests and educating requestors on parameters to ensure their informational needs are met accurately and within deadlines.

I am excited about the prospect of joining Kunai, a company known for its high standards and commitment to exceeding client expectations. Your emphasis on not only technical expertise but also effective communication and an ability to handle detail-oriented work aligns perfectly with my skill set and professional ethos.

My academic background, with a Bachelor's degree and over 7 years of hands-on experience in the data engineering space, positions me as a strong candidate for this role. I have a proven track record in using tools such as Azure Data Factory, MS SQL, Azure Synapse, SSIS, SSRS, SQL Query Analyzer, Power BI, Cognos, and Excel. Additionally, my familiarity with noSQL databases like Cosmo and MongoDB, along with experience in the Azure environment and other related tools, makes me well-equipped to contribute effectively to Kunai's objectives.

I am impressed by Kunai's commitment to client success and the opportunity to work on challenging technical projects. Enclosed is my resume, providing additional details about my professional journey and achievements. I look forward to the possibility of discussing how my skills and experience align with the needs of Kunai in greater detail.

Thank you for considering my application. I am eager to contribute to Kunai's mission and success.

Sincerely,

Shouvik Sharma
